

eDiscovery. Discovered Here.™

The first offering of its kind, Discovery Partner® remains an industry leader among hosted review systems. Discovery Partner fuses proven methodology with case-specific configurability for the perfect review environment, with an innovative Production Rules Manager to automate and enforce the correct rules on what gets produced and what does not.

Discovery Partner includes:

- Simple, intuitive user interface for accurate, efficient review
- Secure Internet access, anytime and anywhere.
- CompareVue™ for faster, more accurate review.
- Family based tagging for fast, accurate first review, with item level tagging for privileged review.
- Production Rules Manager automate's and ensure's the production accuracy.

Discovery Partner

EED Discovery Partner™ Hosted Review Platform for Faster, More Accurate Review and Productions

Discovery Partner Features

Accurate, Efficient Review

Review-Based Highlighting - Guides reviewers to key issues or topics by pre-defining terms associated with responsiveness, privilege or other subjective categories. Terms in each category are highlighted in a unique color for easy identification.

CompareVue Microclustering — Increases the speed of reviewing dupes, near-dupes and email threads by up to 300% by creating relationship clusters for each document assigned to a reviewer, significantly improving coding consistency. Reviewers use a simple workflow system to compare differences between these similar documents rather than fully reviewing every document. CompareVue also automatically synchronizes annotations across exact duplicates so reviewers need only review one member of each duplicate set.

Advanced Search Capabilities — Attorney can conduct searches rapidly allowing you to dig deeper into the evidence to uncover issues and information to improve case strategy. Search speed allows review managers to assign query blocks to reviewers very efficiently.

DISCOVERY PARTNER FEATURES

Simplified Review Management

Secure client portal — Discovery Process eXcellence (DPX) gives clients quick and easy Internet access to the information they need for improved end-to-end eDiscovery management.

Production Rules Manager — Enforces business rules associated with privileged or confidential items when doing exports for the purpose of production, increasing accuracy, saving time and reducing the risk of inadvertently producing privileged information.

Item Level Annotation (ILA) — Gives review managers the option to enable selected reviewers to do item level coding of items within a family. This gives review managers the flexibility to use family level coding early in the process for speed and consistency, then item level coding when conducting review of items coded as being potentially privileged or confidential.

Bulk Annotation — Allows documents to be tagged based on fields for responsiveness, confidentiality, privilege and client-specified codes. Reviewers can annotate items individually or in groups, significantly increasing the rate of review.

Configurable Annotation Pane — Allows review administrators to define matter-specific fields and values for the annotation pane, providing review efficiency while allowing you to maintain data control.

Redaction-On-Demand — Allows users to quickly create images of items for redaction “on-the-fly”. Multiple redacted views may be re-associated with the native document to simplify navigation.

Effective Support for Complex Projects

Complete Review Management — Allows review administrator to control electronic coding sheet configurations, review assignments, workflow tracking and user accounts.

Native Review — Eliminates the need for pre-review document conversion, which reduces the time it takes to move data from processing to review and enables you to convert only responsive items — saving you time and money.

Integrated Native & Image Review — Enables review of items in their native format, as images or as combined sets. This ensures complete access to important document metadata and advanced native application features, like embedded comments and formulas or document revisions. Image viewers provide seamless navigation for the reviewer.

Foreign Language Support — Provides integrated review and full search capabilities for foreign language documents created with a Unicode character set.

No Reviewer PC Configuration Required

— Ensures anytime, anywhere access to Discovery Partner. EED eliminates the need for configuration of reviewers’ systems and provides Internet-based access via Microsoft Terminal Services. Also, there is no transfer of files to the reviewer’s computer, ensuring maximum security for confidential and privileged data.
